 (501) 817-6900

 Northwest Arkansas

Skills

 **Data & Databases**

SQL, PostgreSQL, Data Cleaning,
Data Validation, Relational Databases,
ETL/Data Pipelines

 **BI & Visualization**

Apache Superset, Metabase, Tableau,
Apache Zeppelin, Excel

 **Programming & Scripting**

Python, R, Bash, PowerShell

 **Tools**

Git, GitHub, Docker, pgAdmin, RStudio,
JetBrains Suite

Summary

Data Analyst with a strong Computer Science and Data Analytics background. Experienced using SQL, PostgreSQL, Superset, Metabase, and Tableau to analyze operational data, build dashboards, validate results, and support business decision-making.

Experience

Bentonville Schools

Bentonville AR

Technology Support Specialist

Jan 2026 - Present

- Provide hardware, software, account, and network support across district facilities, using structured troubleshooting to resolve technical issues.
- Manage Windows workstations, user accounts, connectivity, and access issues while documenting recurring problems and resolutions.

First Electric Cooperative

Jacksonville AR

Data Analytics - Work Study Student

Jun 2024 - Apr 2025

- Wrote and optimized PostgreSQL queries to extract, join, filter, and analyze operational data for reporting and business intelligence.
- Developed interactive dashboards and reports using Apache Superset, Metabase, and Zeppelin to help operational teams monitor data and support decision-making.
- Assisted with data pipeline migration and validation, helping ensure reporting data remained accurate and accessible across enterprise systems.
- Translated operational requirements into reusable SQL queries, metrics, and dashboard visualizations while validating results for accuracy before stakeholder delivery.

Projects

Student Account Sharing Detection

2026 - Present

- Used SQL and Metabase to investigate Chromebook login and device activity, identify potential account-sharing and anomalous session patterns, and support staff review.
- Analyzed username, device, and session data to surface unusual account-device relationships and built reports to make those patterns easier to investigate.

Outstanding Service Orders Dashboard

2025

- Wrote PostgreSQL queries to identify and analyze outstanding service orders using defined operational business rules.
- Built an interactive Superset dashboard allowing users to analyze open service orders by district, date, and other operational dimensions.

Org Chart Application

2024-2025

- Developed a PostgreSQL-backed organizational hierarchy application supporting employee relationships, profile data, and expandable organizational structures.
